SCI-AGRO Presentation

Your product.
Our responsibility.

Who we are

KNOWLEDGE APPLIED TO THE SAFE DEVELOPMENT OF SANITIZING PRODUCTS

**GLP recognised
since March 2019**

**A team of 140+
specialists**

A new field. Established experience.

We started working with sanitizing products in 2025, backed by the full experience, infrastructure and solidity of SCI-AGRO.

Facilities

TEST FACILITY LOCATED IN CHARQUEADA / SP, BRAZIL

11,000m²

of area supporting studies and laboratory routines.

Continuous expansion

Ongoing investment in facilities and technology.

A structure designed to combine operational capacity, technical reliability and a **fast response** to market demands.

Quality and monitoring

TRANSPARENCY IN PROJECT MANAGEMENT

PMO

Responsible for monitoring project progress.

Client portal

Project status and report access through the website.

Technical team

Experienced professionals and quick contact.

Languages

Simultaneous issuance when required.

Structured monitoring to reduce noise, gain predictability and keep the sponsor close to the operation.

Our services

TECHNICAL SCOPE FOR DIFFERENT REGULATORY DEMANDS

Microbiological
efficacy

Physicochemical

Entomological
efficacy

In vivo & in vitro
toxicology

Genotoxicity

Ecotoxicology

Pesticide residues

R&D and training

Microbiology Studies

DISINFECTANT EFFICACY

Microbiological assays to assess the **efficacy of disinfectant products**, with reliable data for studies, validations and regulatory demands.

ASSAYS

- Bactericidal efficacy · use-dilution (AOAC and INCQS)
- Fungicidal efficacy
- Quantitative efficacy assay · CEN
- Bacteriostatic and fungistatic efficacy
- Total bacterial count
- Screening for pathogenic microorganisms

Microbiology applied to safety and compliance.

MICROBIOLOGY LABORATORY

Infrastructure prepared for specific studies, including the Ames test with Salmonella.

Physicochemical Studies

EXTENSIVE SCOPE (MORE THAN 63 STUDIES) COVERING REQUIREMENTS IN BRAZIL, EUROPE AND OTHER SOUTH AMERICAN COUNTRIES

- **Active ingredient content** by chromatography and titration.
- **Accelerated and long-term stability.**
- pH, density, viscosity, organoleptic properties, among others.

Precise technical application of the guidelines: one less layer of uncertainty in the regulatory package.

PHYSICOCHEMICAL LABORATORY

Equipment, team and method working as a single technical mechanism.

Entomological Analyses

EFFICACY OF INSECTICIDES, RODENTICIDES AND MOLLUSCICIDES

ASSAYS

- Baits · cockroach, ant, mollusc and mosquito
- Contact insecticides · surfaces
- Direct spray
- Termiticides · dry wood and soil
- Space application · fogging and ULV
- Larvicide potency · biological and chemical
- Rodenticides
- Home gardening
- Mosquito efficacy in architectural paints
- Cosmetic repellents
- Beta-exotoxin screening
- Insecticide resistance in vectors · CDC bottle bioassay

Custom studies designed to the client's needs — among other specific assays.

Crawling

Cockroaches, ants, termites and molluscs — baits, contact and surface application.

Flying and vectors

Mosquitoes and larvae — larvicide potency, repellents and resistance in vectors.

In vitro and in vivo Toxicology Studies

TECHNICAL EXPANSION ALIGNED WITH CONCEA

- **Eye irritation / corrosion:** Short Time Exposure (STE), BCOP and EpiOcular.
- **Skin irritation / corrosion:** reconstructed human epidermis test method.
- Acute **oral** and **dermal** toxicity in rats.
- **Skin sensitisation:** In Chemico and In Vitro.

Less reliance on in vivo models and greater technical speed whenever the guideline allows.

IN VITRO AND IN VIVO TOXICOLOGY LABORATORY

A growing area for faster studies, with technical rigour and alignment with good practices.

Genotoxicity Studies

MEETING REQUIREMENTS AND OECD GUIDELINES

OECD 471 Bacterial Reverse Mutation (Ames)

OECD 474 In vivo Mammalian Erythrocyte Micronucleus

OECD 487 In vitro Mammalian Cell Micronucleus

OECD 476 / 490 In vitro Mammalian Cell Gene Mutation

Higher-precision equipment, such as flow cytometry in micronucleus studies.

GENOTOXICITY LABORATORY

A technical environment prepared for studies requiring repeatability, standardization and precise readings.

Ecotoxicology Studies

AQUATIC AND TERRESTRIAL

TESTS INCLUDE

Soil microorganisms · nitrogen cycle

Soil microorganisms · carbon cycle

Bees and larvae · oral and contact, acute and chronic

Birds · acute oral

Birds · dietary

Biodegradability in soil

Earthworms · acute and chronic

Algae · growth inhibition

Fish · acute and chronic

Microcrustaceans · acute and chronic

ECOTOXICOLOGY LABORATORY

Facilities, protocols and operational care for reliable ecotoxicology studies.

Pesticide Residue Studies

ANALYTICAL PHASE WITH STATE-OF-THE-ART TECHNOLOGY

- Professionals experienced in **method development, validation and analytical conduct.**
- State-of-the-art equipment: liquid (**LC/MS-MS**) and gas (**GC/MS**) chromatography.
- Able to act as **Principal Investigator** or **Study Director**.

Analytical precision to support regulatory decisions and product development.

PESTICIDE RESIDUE LABORATORY

Infrastructure focused on sensitive detection, traceability and data robustness.

The SCI-AGRO Commitment

APPLIED SCIENCE TO BRING NEW PRODUCTS TO MARKET

Helping new and better products reach the market, with a commitment to safeguarding health, human safety and the **protection of the environment.**
